/note="Vector: p5.1180; Site 1: EcoRI; Site 2: KhoI; The
library was prepared from poly4+ RNA from drought-stressed
loblolly pine (Pinus taeda) roots. Water was withheld from
ramet clones until predawn needle water potential reached
-1.75 MPa. On day 7 roots were harvested for RNA
isolation. Double-stranded cDNA was cloned
unidirectionally into p511180. Inserts excised with EcoRI
(5' end) and XhoI (3' end)."

RNA prepared and library constructed by W. Walter Lorenz, School of
RNA prepared and library constructed by W. Walter Lorenz, School of
Forestry, University of Georgia; plant material prepared at the
University of Florida; sequencing done in the Laboratory for
Genomics and Bioinformatics, University of Georgia. Sequence ends
have been trimmed to exclude vector and regions below Phred quality
16. Three-prime sequences are presented as their reverse complement
and have been trimmed to exclude polyA.

/clone_lib="NKCI (Msf Xylem Compression wood taken from three six-year old trees (three different genotypes), in the juvenile phase. These trees were induced to form the juvenile phase. These trees were induced to form the juvenile phase. These trees were induced to form the bottoms of the inclined stems, and a mixture of all three genotypes was used for the library. Oligo-dr primed cDNA was directionally cloned into the ECORI-XhoI Bluescript X vector arms. NOTE: The sequences contain a 'CNNA adapter' between the ECORI site and the start of the EST. The adapter sequence is 'AATTCGGCACGAG'."

ground. Differentiating xylem was harvested from the sides of the inclined stems, and a mixture of all three genotypes was used for the library. Oligo-dT primed cDNA was directionally cloned into the EcoRI-AND BlueScript SK between the EcoRI site and the start of the EST. The adapter sequence is 'AATICGGCACGAG'."

/note="Vector: Uni-ZAP XR; ecotype: Landes; The library
was made from the roots of 6 weeks of seedlings grown in
hydroponic conditions. A three weeks drought stress
treatment was applied by lowering the osmotic potential of
the nutrient solution to -0.45 MPa using 170 g/l of
polyethylene glycol as an osmoticum. A mixture of
genotypes were used. Oligo-dT primed cDNA was
directionally cloned into the EcoRI-XhoI lambda-ZAP vector
arms and mass-excised to form a pBluescript phagemid"

RNA prepared and library constructed by W. Walter Lorenz, School of
Forestry, University of Georgia; plant material prepared at the
University of Florida; sequencing done in the Laboratory for
Genomics and Bioinformatics, University of Georgia. Sequence ends
have been trimmed to exclude vector and regions below Phred quality
16. Three-prime sequences are presented as their reverse complement
and have been trimmed to exclude polyA.
Seq primer: M13-21 (TGTAAAAGGACGGCCAGT)

(bases 1 to 505)
ince="Vector: pSL1180; Site 1: EcoRI; Site 2: XhoI; The library was prepared from poIyA+ RNA from loblolly pine library was prepared from poIyA+ RNA from drought. Water was withheld from tramet clones until predawn needle water potential reached -1.75 MPa. Plants were well watered on day 7 and allowed to recover for 2 days, at which time roots were harvested for RNA isolation. Double-stranded cDNA was cloned unidirectionally into pSL1180. Inserts excised with EcoRI (5' end) and XhoI (3' end)."

/ note="Vector: BlueScript SK; Site 1: Eco RI; Site 2:
XhoI; The library is from early (spring) wood, taken from
three six-year old trees (three different genotypes), in
the juvenile phase. These trees were induced to form side
wood by bending to a 45 degree angle and tying them to the
ground. Differentiating xylem was harvested from the sides
of the inclined stems, and a mixture of all three
genotypes was used for the library. oligo-dT primed cDNA
was directionally cloned into the EcoRI-XhoI BlueScript SK
vector arms. NOTE: The sequences contain a 'cDNA adapter'
between the EcoRI site and the start of the EST. The
adapter sequence is 'AATTCGGCACGAG'."

/ clone lib="MXSI (ME Xy]em early (spring) wood, taken from three six-year old trees (three different genotypes), in three six-year old trees (three different genotypes), in the juvenile phase. These trees were induced to form side wood by bending to a 45 degree angle and tying them to the ground Differentiating xylem was harvested from the sides of the inclined stemm, and a mixture of all three genotypes was used for the library. Oligo-dT primed cDNA was directionally cloned into the EcoRI-XXDI BlueScript SK vector arms. NOTE: The sequences contain a 'cDNA dapter' between the EcoRI site and the start of the EST. The adapter sequence is 'AATTCGGCACGAG'."

The library was made from immature xylem from the side of inclined stems of differentiating wood. A mixture of four genotypes were used. Oligo-dr primed cDNA was directionally cloned into the EcoRI-XhoI lambda-ZAP vector arms.

           pallescript sequence. The vector was then packaged using pallescript sequence. The vector was then packaged using Gold gigapackaging extracts. Library was grown in XLIBlue MRF' cells and amplified. The library was grown in XLIBlue MRF' cells and splitting. The library was grown in XLIBlue exassist as a helper phage that releases the pBluescript sequence and circularises it as single stranded plasmids that are then packaged (by helper phage) and secreted out of the host cell as phagemids. SoLR cells were transformed with phagemids and the library was plated out on LB-amp plates to select for transformants. Approximately 1,000,000 colonies were grown and recovered. The double stranded plasmid library was recovered by using Quiagen Midi prep kit. 2 micro grams of each library were used to transform DH10B cells by electroporation."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-325-193A-5

Sequence 5, Application US/09325193A

Patent No. 6406705

GENERAL INFORMATION:
APPLICANT: Davis, Heather L.
APPLICANT: Schorr, Joachim
APPLICANT: Schorr, Arbur M.
TITLE OF INVENTION: Unmethylated CpG Dinucleotide as an Adjuvant
FILE REFERENCE: C1039/7025/HCL
CURRENT APPLICATION NUMBER: US/09/325,193A

CURRENT FILING DATE: 1999-06-16

PRIOR FILING DATE: 1998-09-16

PRIOR FILING DATE: 1998-09-16

PRIOR FILING DATE: 1998-03-10

PRIOR APPLICATION NUMBER: US 09/154,614

PRIOR APPLICATION NUMBER: US 09/154,614

PRIOR APPLICATION NUMBER: US 09/154,614
                                                                                                                                    GENERAL INFORMATION:
APPLICANT: Krieg et al.,
TILLE OF INVENTION: IMMUNOSTIMULATORY NUCLEIC ACID MOLECULES
NUMBER OF SEQUENCES:
ADDRESSEE: Fish & Richardson P.C.
STREET: 4225 Executive Square, Suite 1400
CITY: La Jolla
STATE: CA
COUNTRY: USA
ZIP: 92037
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;
